CPD Overview

Hush Acoustics have been a leading designer and manufacturer of high performance acoustic products and systems for over 30 years - one of the longest established acoustic solutions specialists in the United Kingdom.

Hush provides a wide range of systems and products for separating floors, walls and ceilings in new build, change of use/conversion and refurbishment projects - including educational buildings, commercial premises, residential multi-occupancy or single dwelling properties.

All products and systems are designed to deliver acoustic performance that goes beyond the minimum requirements of UK Building Regulations in England and Wales (Approved Document E), Scotland (Section 5 of the Scottish Building Standards, and Northern Ireland (Approved Part G). Its systems are also compatible with Robust Details, BB93 (Design guidance for schools) and the parameters of the Code for Sustainable Homes.

All Hush products are responsibly sourced from recycled and sustainable raw materials, with absolute minimum usage of petro-chemical based foam products.
