CPD Overview

CPD Overview

Clement manufactures an innovative range of steel windows, steel doors and steel screens for both private residences and commercial projects.

We provide a complete service – from the provision of technical drawings through to manufacture, installation and after sales support - whether your project is a traditional restoration project, one involving Listed Buildings or Conservation Areas, or a new build.

Our previous work includes prestigious heritage projects across the UK and in the USA, including well known buildings such as Bonhams in London, Norwich City Hall and the Eldorado Building in Manhattan. We take pride in our reputation for premium products, excellent craftsmanship and industry expertise and we are delighted that so many of our customers return to us time and again because they know they cannot get a better window anywhere else.

We specialise in manufacturing new steel windows which look similar to original or existing heritage metal windows. Our hot rolled steel windows and doors are produced from 98% recycled steel source material and meet the latest performance requirements for insulation, weatherproofing and security. We also manufacture cold formed, thermally broken steel profile systems by Jansen. All of our windows are crafted to your bespoke design in our ISO 9001 and ISO 14001 approved factory. With Clement Windows you can expect technologically advanced, yet low maintenance steel windows, which will last for many years.

Clement also supplies a selection of conservation rooflights, available from stock in either a tile or a slate profile. If a standard size does not meet your requirements, bespoke options are also available.

Available CPD Material (2)

Steel Windows - A New Generation

For over 100 years steel windows have been favoured by Architects as their preferred choice of window material due to their elegant sight lines, strength and versatility.

This presentation will cover:

- The importance of the steel window in Architecture over the last century and before.
- The characteristics of steel windows throughout history.
- The role of steel windows today with regards to the environment and sustainability.
- · Legislation, standards and performance features governing steel windows.
- The future for steel windows, including the introduction of thermal breaks and the consequences for current day steel window specification.

This CPD can be delivered to you live and remotely.

Material type: Online Learning, Seminar

RIBA Core Curriculum: Building conservation and heritage

Design, construction and technology

Knowledge level: General Awareness

Steel Windows - A New Generation no longer used
