CPD Overview

Our EPS Sustainable thermally efficient flooring system offers a revolutionary new way to insulate ground floors.

GDeck is installed with precise moulded parts which converts the T beam into a structural I-Beam and accurately calculates U values specific to each floor configuration with the guarantee of SAP assessment calculations.

The Part L compliant structural ground flooring solution is a unique Fabric First system that saves time and money with speedy installation whilst meeting the new Part L revisions and Future Homes Standards in 2025.

Its unique interlocking structural top rail compliments structural integrity with excellent thermal performance. 100% recyclable with no need for inefficient installation the GDeck system allows for a simple inspection for 'as-built' reporting and supports BREL inspections for site audits.

With U Values as low as $0.09\text{w/m}^2\text{K}$ contact us at enquiries@mouldedfoams.com to see how GDeck can future proof your project.

The least waste, labour cost system on the market further improving sustainability credentials in our journey towards Net Zero.
