VR, The Present and Future of Graphic Representation in Modern Architecture

This CPD will discuss the new ways in which architectural projects can and will be visualized with VR. It will move through a history of architectural graphic representation before exploring new technologies and their place in each stage of the creative process. The aims of this workshop include:
- To inform you about new design and VR technologies for architecture
- To allow you to experience different types of VR
- To increase awareness of the VR revolution and its impact on the architect and designer's daily work
- To understand the evolution of graphic design in architecture from a technology-related perspective

Material type:	Workshop
RIBA Core Curriculum:	Design, construction and technology
