The Selection, Design & Installation of Natural Stone for Rainscreen Cladding in Modern Facade Architectural Design

This CPD introduces the benefits of using natural stone for ventilated rainscreen cladding. It will help specifiers and architects understand the important factors which are critical in designing and specifying for the successful installation of a natural stone facade.

The presentation provides an elaboration on the history, means of erection and development within natural stone cladding as means of protecting the building against the elements and enhancing the visual aspects and architectural values of the building external envelope.

All most common types of natural stone types and their supporting carrier systems are presented and supported by images of completed projects across the UK. Great emphasis is put onto structural integrity of stone cladding design and a guide to correct stone selections is provided. Apart from the natural stone, all the comprising components and cladding build-up construction are discussed including insulation, fire barriers and membranes. This CPD can be delivered to you live and remotely

Material type:

Online Learning, Seminar

RIBA Core Curriculum:

Design, construction and technology

Knowledge level:

General Awareness

Classifications

Subject/Product Areas (CI/SfB)

Finishes
