Dynamic Liquid Crystal Glazing

Dynamic Liquid Crystal Glazing controls incoming solar heat and sun light in an instant. This will reduce energy consumption for building cooling or heating, without the need for high-maintenance exterior window blinds, or a complex façade built-up. This allows you to Instantly adjust daylight quality to suit your individual needs while preserving outside views. Studies have shown that constant access to daylight leads to higher productivity, creativity and wellbeing. This CPD gives an understanding of how this works and the benefits to you and your building.
