Designing with Bricks

Our session on 'Designing with Bricks' is a comprehensive and insightful program that delves into the art and science of incorporating bricks in architectural designs.

The CPD provides architects, designers, and construction professionals with a thorough understanding of the vast possibilities and creative potential of bricks in modern construction projects. The session covers essential topics such as brick types, manufacturing processes, sustainable practices, and innovative design techniques.

Participants will gain knowledge about the various patterns, colours, and textures of bricks, and how to use them effectively to enhance the aesthetics and functionality of buildings.

Moreover, the CPD explores the structural and thermal properties of bricks, offering guidance on optimizing their performance within sustainable and energy-efficient designs. With a focus on both traditional and contemporary brickwork, this CPD equips professionals with the expertise to craft visually appealing, durable, and environmentally conscious structures that stand the test of time.

By the end of this CPD delegate should :

1. Have a comprehensive understanding of brick types.
2. Understand integration of sustainable practices.
3. Understand the creative application of brick in design.
4. Know the structural and thermal considerations.
5. Have seen Case Studies on the subject.
