CPD Overview

Barrisol's unique solutions for wall and ceiling surfaces are available with lighting effects, acoustic treatments, 3D forms, printed designs, reflective mirror, HVAC integration and non-combustible A2-s1-d0 (GTS) properties.

Receiving over 50 awards in recognition of innovation in creating quality products with outstanding technical characteristics and exceptional aesthetic. Barrisol materials adaptability allows for the most adventurous forms, emphasised by excellence in workmanship, Barrisol becomes an essential tool for the creative mind.

Comprising of over 20 systems and an unlimited colour palette, Barrisol delivers a complete range of products for every design professional. Choose from numerous finishes or add a personal touch by printing your own image. Barrisol sheets provide excellent acoustics, including standard and luminous acoustic walls and ceilings, Arcolis acoustic custom made panels, Microsober for acoustic performance to glass windows and GTS for A2-s1-d0 acoustic solutions, Barrisol can be customised to suit your acoustic requirements including the possibility to print the décor of your choice.

Barrisol helps to meet criteria for BREEAM and LEED. Profiles and sheets with harpoon are 100% recyclable and contain a minimum of 40% post recycled material. Our Biowood and Biosource ranges are made with up to 92% natural ingredients from plant and wood composition. EPD certified. Sheets are rated A+ for VOC and Green Guard Gold certified. All products also carry appropriate fire certification independently tested by international organisations.

Available CPD Material (2)

Innovative HVAC Ceilings: a comfortable, silent and invisible solution to providing energy savings and high indoor air quality.

By completing this CPD seminar you will acquire a general understanding of stretch ceiling and walls systems and be able to include these systems and specify with confidence.

This seminar shows a range of project applications that will inspire you and inform you of the scope of stretch ceiling and wall systems.

The seminar covers the technical details of these systems, how the materials can be incorporated into services and how the systems can help acoustic performance.

These solutions also allow the technical components to be hidden by the ceiling, generate a constant and uniform temperature, with no draughts, and ensure high acoustic comfort. HVAC ceiling solutions provide Class A+ for Indoor Air Quality with high efficiency air renewal and savings on energy consumption.

These HVAC ceiling solutions can also be upgraded with UV lamps to disinfect the air from bacteria and viruses. Modular HVAC ceiling units help provide air conditioning, light and acoustic comfort to a room via a suspended island, automatically adapting the unit diffusion flow according to the temperature of the air blown. The fan coil can also be integrated in a decorative platform fitted with lateral diffusion outlets.
